Werkzeuge fürs Leben · Tools for life

**DX-HEAD**

**FORESTRY- & CARPENTRY TOOLS**

# SINCE 1781

## OVER 225 YEARS OF OX-HEAD

### Tradition and quality.

**OX-HEAD** was established by the Fahlefeld brothers in Wuppertal-Cronenberg. The company's "OX-HEAD"  trade mark was registered with the former Remscheid Register of Trademarks on 2nd June 1781. It has become one of the oldest surviving trademarks in the tool industry in the Wuppertal region of Germany.

In **1869**, the company was taken over by **Daniel Kremendahl**, an existing employee. Growing experience and technical progress were valuable aids in continuous improvement of the tools over the course of time.

In 2004, the company was integrated into the **GEDORE Group**. Since that time, the high-grade **OX-HEAD** brand tools have been manufactured under the name of **DAKO Werk Dowidat KG**.

The former headquarters of **OX-HEAD** was subsequently transferred to the **DAKO** company building in Remscheid-Lennep.

The manufacture of quality tools requires high-grade raw materials. **OX-HEAD** tools are preferably manufactured of C60 steel. This steel grade is higher than the minimum DIN-specified quality (C45). One of the features of C60 steel is its incredible toughness, which guarantees long tool life. A special alloy increase the qualities within the steel grade even more, guaranteeing the best possible wear resistance.

Only high-quality wood is used in tool shaft production, with three-way shaft wedging to ensure optimum safety.

Instead of being sharpened to a knife edge, **OX-HEAD** tools are honed to a cambered edge, which results in longer edge life.

With more than 225 years of company history behind them, our employees draw on this vast experience to produce tools to the highest quality standards.

# Axes

## Hatchets

# Wedges

## Bark spuds

The **awards for OX-HEAD tools** with test seals from qualified inspection bodies certify the high quality of OX-HEAD tools:

### KWF-Gebrauchswert

Forestry tools and work aids that have been extensively tested by the Kuratorium für Waldarbeit und Forsttechnik e.V. (KWF) in Groß-Umstadt, are awarded the "KWF-Gebrauchswert" [KWF Utility Value] test seal. They meet all the requirements of the latest technical practice, including economy and the standards relating to safety-at-work, ergonomics and environmental compatibility. The tests encompass technical measurements, tests in forestry use and practical surveys. The new "KWF-Gebrauchswert" test seal replaces the previously well-known FPA label. 🇩🇪

### VPA GS

Tested safety by the institution for testing and checking (VPA) in Remscheid. For more than 50 years, VPA has been intensively involved in testing hand tools.

### KWF-Test

The "KWF-Test" seal is used to designate products on which individual technical features have been successfully tested. The KWF also awards this seal in cases where products have been successfully tested for semi-professional forestry use.

### Dreipilz

The "Dreipilz" quality seal is awarded for processing high-grade steels in conjunction with continuous monitoring by the institution for testing and checking (VPA) in Remscheid.

**Info!**

The various applications require specially adapted tools. To simplify the search for the right tool, our products are accordingly identified with their intended purpose:

Axes for lopping, felling and arboriculture maintenance

Axes and hatchets for universal use

Splitting tools

**DCHSENKOPF**

## OUT OF THE FORGE ...

## ... AND INTO THE FOREST

Inserting and clamping the handle. The triple clamp provided by one wooden wedge and two ring wedges ensures a lasting and safe connection.

Sand-blasting the surface. Fine-grinding the cutting edge. A crowned cut increases stability. Transparent varnish protects the axe head from corrosion.

Permanent marking by means of a stamp bearing the manufacturer's symbol. Tempering (hardening and tempering) the cutting edge ensures hardness and toughness.

Final shaping under the forging hammer. Trimming excess material and rough-grinding the axe.

The glowing blade is beaten out on the forging roll.

The red-hot blank is shaped on a forging press and the hole is made for the eye. Excess burring is removed.

The forged blanks are sawn off from rolled C60 tempering steel.

## More safety, more ...with the patented

## Double certified safety...

### KWF-Gebrauchswert

The **BIG OX** has been awarded the test seal of the KWF (Curatorship for forest work and technology e.V.) Groß-Umstadt. The seal certifies the utility value of forestry tools and similar, in terms of their work safety, ergonomics and environmental compatibility

### VPA GS-geprüfte Sicherheit

**BIG OX** pull-out values tested by the Institute for testing and checking Remscheid (VPA). The tested handle pull-out values are several times higher than those specified in DIN (see chart).

**DCHSENKOPF** 

# effectiveness...

**ROT BAND-PLUS system**

- High-grade hickory handle.  
Extremely rigid and break-proof.

# ROT BAND-PLUS

## All the **benefits** at a single glance...

- Patented safety system that sets standards: long handle protective steel sleeve, tapered collar, fixing plate and wood screw form the head and shaft into a unit
- Absolutely safe joint between the handle and head
- Long life – ensuring extremely good value for money
- Maximum work safety - even if the axe slips
- ROT BAND-PLUS spare handles are available complete with a handle protective steel sleeve, tapered collar, fixing plate and wood screw
- With KWF-Gebrauchswert  and VPA GS test seals 

## The **ROT BAND-PLUS** range ... at a glance

**SPLIT-QUICK hatchet ROT BAND-PLUS**  
No. OX 644 H (see page 14)

**BIG OX Pro-wood splitting hammer**  
No. OX 635 H (see page 12)

**SPLIT-QUICK axe ROT BAND-PLUS**  
No. OX 648 H (see page 14)

**Universal GOLD forestry axe ROT BAND-PLUS**  
No. 620 H (see page 8)

**DCHSENKOPF**

# High-performance forestry axe **ILTIS®** according to the principles of Dr. Gottfried Reissinger\*

\*Author of the book: "The construction basics of the axe"

# ILTIS

- ✔ Ergonomically formed handle of high-grade hickory. Extremely rigid and break-proof

- ✔ The 3-way safety wedging ensures optimum protection and guarantees a secure hold

- ✔ The uniformly thin blade is hardened virtually up to the eye. As a result, the cutting edge retains its sharpness longer

## The special feature:

The uniformly thin blade is hardened virtually up to the eye

### The advantages:

- ✔ **Low weight**
  - Greater cutting power with less application of force
  - More ergonomic and efficient working
- ✔ **High utility value**
  - The full-head hardening ensures that the cutting edge retains its sharpness for a very long time, guaranteeing a long life
- ✔ **Easy re-sharpening**
  - From the cutting edge to the eye, the blade is forged uniformly thin and carefully hardened. If professionally re-sharpened, there is no need to re-harden.
- ✔ **Reduced risk of breaking**
  - The thin, springy blade absorbs the bending forces on every impact. This significantly reduces the risk of breaking and correspondingly extends the life.
- ✔ **Special steel**
  - The design of this type of axe, with the described advantages, is possible only by using this high-grade special steel. Even at low temperatures, this steel remains viscoplastic, thereby allowing continuous use in extremely cold weather and on all types of hardwood

**DCHSENKOPF** 

## OX 10 E + H Axe ILTIS® Model Europe

- For debarking, felling and cultivation
- The uniformly thin blade, hardened up to the eye, ensures a high utility value, long life and low weight
- Can be easily re-sharpened by the user
- Blade fine polished, with blade-protection
- With high-quality handle in cow foot pattern made of ash (OX 10 E-) or hickory wood (OX 10 H-)

Code	No.						Spare-

## OX 16 H Axe ILTIS®-DOUBLE BIT Model Canada

- The top model of the Canadian lumbermen - with 2 edges, e.g. for two different cuts on one axe
- For debarking, felling and cultivation
- The uniformly thin blade, hardened virtually up to the eye, ensures a high utility value, long life and low weight
- Can be easily re-sharpened by the user
- Blade fine polished, with blade-protection
- With high-quality hickory handle in knob pattern

 As a gift for special occasions available in a high gloss polished finish in silver and gold versions. (Only for presentation purposes, not for use on work.)

## ...the axe under the axes

- Indispensable in wood-working
- Universal use

### OX 620 H Universal forestry axe ROTBAND-PLUS

#### Rhineland pattern

- Indispensable in wood-working and gardening
- With patented handle joint ROTBAND-PLUS: Handle sleeve, tapered collar, fixing plate and wood screw bond the hammer head and the handle into one unit and ensure an optimum in safety
- The long handle sleeve made of steel protects the handle from damage when the hammer misses its target. This guarantees a long service life
- Fine polished axe head with blade-protection
- With high-quality hickory handle in cow foot pattern
- The spare handle is delivered completely with protective sleeve, tapered collar, fixing plate and wood screw
- With the spare handle OX E-620 H-1250 the axe no. OX 20 in sizes 1000 g and 1250 g can be converted to a ROTBAND-PLUS model

**Break point on a hickory handle**

**Break point on an ash handle**

## Hickory handles:

- High-grade and extremely break-proof wood. Hickory is capable of 3-4 times the physical loading of ash
- Long-fibre structure: increased safety in a handle breakage - the long fibres hold the wood together, avoiding uncontrolled release of the broken-off handle and the axe/hatchet head
- Vibration damping
- Long life = extremely good value for money

## Ash handles:

- Wood specified in DIN as the minimum grade
- Low-cost
- Break-proof
- Short-fibre structure: in the event of a break, the short fibres of the wood are unable to hold the break point together. The handle breaks in two parts.

## OX 235 E Forestry hatchet

- Indispensable in wood-working and gardening
- Blade fine polished
- With high-quality ash handle in cow foot pattern

Code	No.							Spare-
1591649	<b>OX 235 E-0602</b>			600	105	360	900	OX E-78 E-0360

**DCHSENKOPF** 

**Info!**

### General safety notes:

- Never beat steel on steel (for example, hammer or axe against axe). Also steel wedges must be driven in only with a hard wood or plastic hammer. Beating steel on steel can lead to splintering and cause severe accidents.
- Aluminium and plastic wedges must be driven in with appropriate tools such as a splitting hammer. Only these tools are permanently suitable for driving in wedges due to their special design.
- Use tools only for their intended purpose. Example: using the axe as a hammer is not using it for its intended purpose.
- Check the tool before each use. There must be no material cracks on the head and handle. The head must be securely attached to the handle.
- Wear appropriate protective clothing, for example safety glasses, gloves and safety shoes.
- Do not use these tools for lateral leverage
- Use only original spare parts and spare wedges. To ensure a secure fit and therefore a secure joint between the head and the handle, the dimensions must precisely match.

### OX 18 H Throwing axe

- Perfect balance for optimum flight
- Especially designed for the demands of contests
- Form and execution are up to the competition standards
- With consecutive serial number
- Axe head forged and fine polished
- With high-quality hickory handle. Very appealing optic through a special wood treatment.
- 3x wedging of the handle effects a non-detachable handle join
- With high-quality leather blade-protection

Code	No.					Spare- 
1591630	<b>OX 18 H-1206</b>	1200	150	750	2000	OX E-99 H-0750

**Info!**

- Once used by aboriginal peoples as a hunting tool and weapon of war, this double-bladed axe began to be used by forestry workers in the last century for leisure purposes. During long stays in the extensive forests of Canada and the USA, axe-throwing competitions represented a welcome change from the rigours of everyday life. Today, the throwing axe is a high-quality item of sports equipment. Traditional championships with precisely defined rules are extremely popular. An increasing number of people around the world are becoming enthusiastic about this sport, with its high potential for enjoyment.

**Info!**

### Wood chopping:

- A wide, approximately knee-high chopping block placed on a flat surface provides the ideal basis for wood chopping. Place the piece of wood to be split on the chopping block and take the splitting axe in both hands. The right hand holds the end of the handle, while the left hand grips the upper part of the handle just below the axe head (for left handers, the reverse applies). Raise the axe and, as you bring the axe down slide the left hand along the handle to the end against your right hand. Often one stroke is enough to split smaller pieces of wood. For large chunks of wood, wedges can be used as an aid.
- Before starting work, always ensure that there is sufficient safety distance from any other persons and objects.
- Wear suitable protective clothing, for example safety glasses and safety shoes.

Further safety notes can be found on page 21

## OX 648 H Axe *SPLIT-QUICK* ROTBAND-PLUS

- Optimum splitting results. Less force required due to wedge-shaped blade
- With patented handle join ROTBAND-PLUS: Handle sleeve, tapered collar, fixing plate and wood screw bond the hammer head and the handle into one unit and ensure an optimum in safety
- The long handle sleeve made of steel protects the handle from damage when the hammer misses its target. This guarantees a long service life
- With high-quality hickory handle in knob pattern
- The spare handle is delivered completely with protective sleeve, tapered collar, fixing plate and wood screw
- With the ROTBAND-PLUS spare handle the axe *SPLIT-QUICK* no. OX 248 can be converted to a ROTBAND-PLUS model

## OX 644 H Hatchet *SPLIT-QUICK* ROTBAND-PLUS

- Optimum splitting results. Less force required due to wedge-shaped blade
- With patented handle join ROTBAND-PLUS: Handle sleeve, tapered collar, fixing plate and wood screw bond the hammer head and the handle into one unit and ensure an optimum in safety
- The long handle sleeve made of steel protects the handle from damage when the hammer misses its target. This guarantees a long service life
- With high-quality hickory handle in knob pattern
- The spare handle is delivered completely with protective sleeve, tapered collar, fixing plate and wood screw
- With the spare handle no. OX E-644 H-1250 the no. OX 244 can be converted to a ROTBAND-PLUS model

# COMPETITION AXE

## Competition axe

- Specially developed for competition use. Hand-forged of special steel.
- Blade ground to a competition cutting edge. High-grade hickory handle and leather blade protector.

## Angle gauge

- Of stainless steel to precisely determine the cutting-edge angle (13°-17°)

## Foot and shin protection

- Made of stainless steel. As protection in the event of the axe slipping. For wearing underneath clothing and inside shoes.

Since 2002 **OCHSENKOPF** is the...  
official German supplier to the **STIHL® TIMBERSPORTS® SERIES**

*"OX-HEAD is my reliable partner – both in competition and for my job."*

## Martin Komárek

- Occupation: Forestry worker, sculptural sawyer
- Four-times European champion of the STIHL® TIMBERSPORTS® SERIES
- Runner-up of the STIHL® TIMBERSPORTS® SERIES
- Successful with OCHSENKOPF

## OX 440 H Champion axe

- With special grinding for training
- Made of special steel
- Triple safety wedge
- With high-quality hickory handle in cow foot pattern and leather blade-protection\*

\* **Note:** Do not use the axe on frozen wood!  
Only use on soft wood, e.g. poplar.

**Info!**

- If you would like more detailed information about our competition items, please contact us. We will be happy to help.

## **OX 42 Aluminium massive wedge**

- Forged safety wedge, DBGM (German Utility Patent), made of high-quality aluminium
- Particularly suitable for felling and splitting
- Acute angled grooves on the front and double longitudinal grooves on the back prevent from jerking back of the wedge
- Suitable for all felling operations including frozen wood
- Extremely robust and little weight

Code	No.			max. stroke height mm	L mm	W mm	
1591878	<b>OX 42-0550</b>			35	215	45	550
1820486	<b>OX 42-0850</b>			35	265	55	850
1591142	<b>OX 42-1050</b>			40	260	60	1050

## **OX 48 Twisted aluminium splitting wedge**

- Forged safety splitting wedge made of high-grade aluminium
- The wedge is twisted by 45° for extremely effective splitting
- Acute-angled grooves prevent spring-back, even in frozen wood
- Extremely light and rugged
- German design patent

Code	No.	max. stroke height mm	L mm	W mm	
1853945	<b>OX 48-0000</b>	75	220	45	800

Info!

## **Advantages of aluminium wedges:**

- High safety - NO splintering of the surface by using steel hammers (no steel on steel)
- NO dangerous repulsion of the chain-saw on touching the wedge
- Extremely light-weight and very stable

## **OX 43 Aluminium chainsaw cutting and felling wedge**

- Forged safety wedge made of aluminium
- Especially suitable for use with motor saw

Code	No.	L mm	W mm	
1591940	<b>OX 43-0510</b>	140	100	510

## **OX 44 - OX 45 Aluminium hollow-wedge**

- Forged from high-quality aluminium
- For felling and splitting
- The ribbed execution with diagonal grooves on the front and two longitudinal grooves on the back side prevents jerking back of the wedge
- The smooth execution has double longitudinal grooves on the front and back side
- Particularly developed for extremely hard and frozen wood
- Available with exchangeable wood shaft and aluminium ring or wear- and weather-proof plastic shaft (DBGM\*)
- The shaft extends the wedge effect and thus enables a higher splitting and spreading effect
- The aluminium ring of the wood shaft prevents from splintering when driving
- Aluminium massive wedge complete = Aluminium hollow-wedge, wood shaft, aluminium ring

\* German Utility Patent

Code	No.		Description	max. stroke height mm	L mm	W mm

## OX 36 H Plastic hammer

- ✓ Made of shock-resistant Polyamid
- ✓ Suitable for safely driving in steel wedges
- ✓ Can also be used for driving in fence posts
- ✓ With high-quality hickory handle in knob pattern

Code	No.	Ø mm	↳ mm	L	Head 		Spare- 
1880012	<b>OX 36 H-2009</b>	130	150	850	2000	2700	OX E-96 H-0850

**Info!**

### Safety notes for wedges

- ✓ Never beat steel on steel: this can lead to splintering and cause severe accidents. Steel wedges must be driven in only with a hard wood or plastic hammer.
- ✓ Aluminium and plastic wedges must be driven in with appropriate tools such as a splitting hammer. Only these tools are permanently suitable for driving in wedges due to their special design.

**For further safety notes see page 21**

## OX 58 Felling lifter

- ✓ Powerful, efficient and ergonomic
- ✓ Turning hook and plate forged
- ✓ Robust steel profile
- ✓ With non-slip, ergonomic handle of cork
- ✓ Adjustable turning hook
- ✓ With angled handle for improved handling

### OX 58-0800:

- ✓ Use: As felling aid and for moving up to a diameter at breast height of 25 cm

### OX 58-1200:

- ✓ Use: As felling aid up to a diameter at breast height 25 cm
- ✓ For moving up to a diameter at breast height 35 cm

### Safety note:

- Felling lifter are only approved for one-man work
- Maximum load on the handle 150 kg
- Damaged or bent felling lifter have to be replaced immediately

Code	No.		L	
1592491	OX 58-0800		800	2800
1592505	OX 58-1200		1300	3600

## OX 59 Aluminium turning hook

- ✓ Ideal for turning of log parts and whole tree trunks
- ✓ Made of high-quality aluminium
- ✓ With robust steel hook for firm grip
- ✓ Non-slip due to additional bent tip
- ✓ Functional and robust
- ✓ Firm grip due to additional rubber handle
- ✓ Tube length 1.4 m, total length 1.52 m

Code	No.		
1980998	OX 59-1500		4900

## OX 51 Turning hook Black Forest pattern

- ✓ For moving and pulling tree trunks
- ✓ Forged of chrome-vanadium steel
- ✓ Due to the bulge the size is adjustable and the tool is suitable for various trunk diameters

Code	No.		Ring Ø	mm	
1592440	OX 51-0000		125	400	1600

**DCHSENKOPF** 

## OX 52 Tong

- ✓ Forged pattern, tips hardened
- ✓ With non-slip, ergonomic handle of cork
- ✓ Jaw width 265 mm

Code	No.	
2231379	OX 52-0000	 985

**Info!**

### Benefits of cork handles:

- ✓ The special combination and variety of physical, chemical and visual properties of cork is ideal for tool handles.
- ✓ Compared with conventional handles of plastic cork provides a tremendous grip.
- ✓ Even in wet weather cork lies securely in your hand.
- ✓ The good absorption of body heat makes it also very pleasant at cooler temperatures.

## OX 53 Tong

- ✓ Drop forged pattern, tips hardened
- ✓ High-quality 2-component handle of cork and plastic
- ✓ Non-slip and ergonomic
- ✓ Handle with recessed grips
- ✓ Jaw width 185 mm

Code	No.	
1609742	OX 53-0000	 480

## OX 50 Z Pulling hook

- ✓ For safe pulling and lifting when clearing smallwood
- ✓ Ground tips for firm grip
- ✓ With non-slip, ergonomic handle of cork

Code	No.	
2231395	OX 50 Z-0000	 210 370

**Info!**

### General safety notes:

- ✓ Never beat steel on steel (for example, hammer or axe against axe). Also steel wedges must be driven in only with a hard wood or plastic hammer. Beating steel on steel can lead to splintering and cause severe accidents.
- ✓ Aluminium and plastic wedges must be driven in with appropriate tools such as a splitting hammer. Only these tools are permanently suitable for driving in wedges due to their special design.
- ✓ Use tools only for their intended purpose. Example: using the axe as a hammer is not using it for its intended purpose.
- ✓ Check the tool before each use. There must be no material cracks on the head and handle. The head must be securely attached to the handle.
- ✓ Wear appropriate protective clothing, for example safety glasses, gloves and safety shoes.
- ✓ Do not use these tools for lateral leverage
- ✓ Use only original spare parts and spare wedges. To ensure a secure fit and therefore a secure joint between the head and the handle, the dimensions must precisely match.

## OX 70 E + H Slashing hook

- For chopping and removing small growth, e.g. shrubs, roots, twigs and small branches
- Forged
- With additional cutting edge on the back
- Cutting edge fine polished

### Tips for re-sharpening the blade:

- ✓ Blunted cutting edges can be re-sharpened by using a whetstone. When sharpening, it is important to ensure that the original geometry of the cutting edge is retained. First of all run the coarse side of the stone over the cutting edge with circular movements. Then use the fine-grain side to achieve the final sharpening.
- ✓ Different sharpening results can be achieved by use of lubricants, e.g. oil or water.

**Info!**

## OX 33-0200 Grindstone

- ✓ Combined grindstone and whetstone made of silicon carbide, with rounded edges
- ✓ This material is considered to be amongst the hardest and best grinding abrasives, and is ideally suited for tools with predominantly flat cutting edges, including axes, hatchets, chisels and knives
- ✓ One side with coarse grain (120) for fast grinding
- ✓ One side with fine grain (320) for fine grinding and honing

### Uses:

- ✓ With light oil for a fine honed finish
- ✓ With paraffin for a normal ground finish
- ✓ With water for a coarser ground finish
- ✓ Dry for particularly heavy material removal

### Tool care and storage notes:

- The correct care of your tool significantly extends the life.
- It is therefore important to always store the tool properly.
- Storage in dry air allows the handle to quickly dry out.
- Storage in conditions which are too damp can cause the wooden handle to swell up, and this permanently damages the fibres in the wooden handle.
- When storing the tool for a longer period, apply some oil or grease to the blade to protect it from rust.
- Blunt blades can be re-sharpened by regrinding.
- Always ensure that the tool is kept in a perfect condition.
- The cutting edge should be covered by an appropriate blade protector.
- A dried-out loose-fitting handle is a safety risk and should be immediately exchanged by a new, original spare part.

## OX 410 - OX 415 Mortise axe

- For working timber faces, e.g. wooden beams
- Made of chrome-vanadium steel
- Cutting edge(s) fine polished

Code	No.	Execution	Blade
