

Building Heavy Trucks and Buses

Atlas Copco power tools for quality and productivity

Sustainable Productivity

Atlas Copco

21st century tool technology for heavy

Atlas Copco is more than tools – we are a total solutions provider. Featuring the world's most extensive range of power tools, assembly systems and process software, our product portfolio is a true reflection of cutting-edge 21st century tool technology. Advanced Atlas Copco solutions and technical support are helping to raise productivity and reduce operating costs for heavy truck and bus manufacturers worldwide.

Meeting your challenges

✓ truck and bus manufacturing

Atlas Copco has tooling solutions that will...

- Speed up production on your existing production line
- Help eliminate bottlenecks
- Raise quality and reduce the number of rejects and reworking further down the line
- Adapt your tooling to handle product variations being built in the same line
- Help reduce your operating costs and make your production more cost-effective to sharpen your competitive edge in the marketplace
- Create a well-planned ergonomic working environment in your plant, helping to increase operator safety and well-being while raising individual productivity.

Look through this brochure, and you will see what we mean!

Vibration and Noise Emission Values

Let's talk joints – safety critical or quality

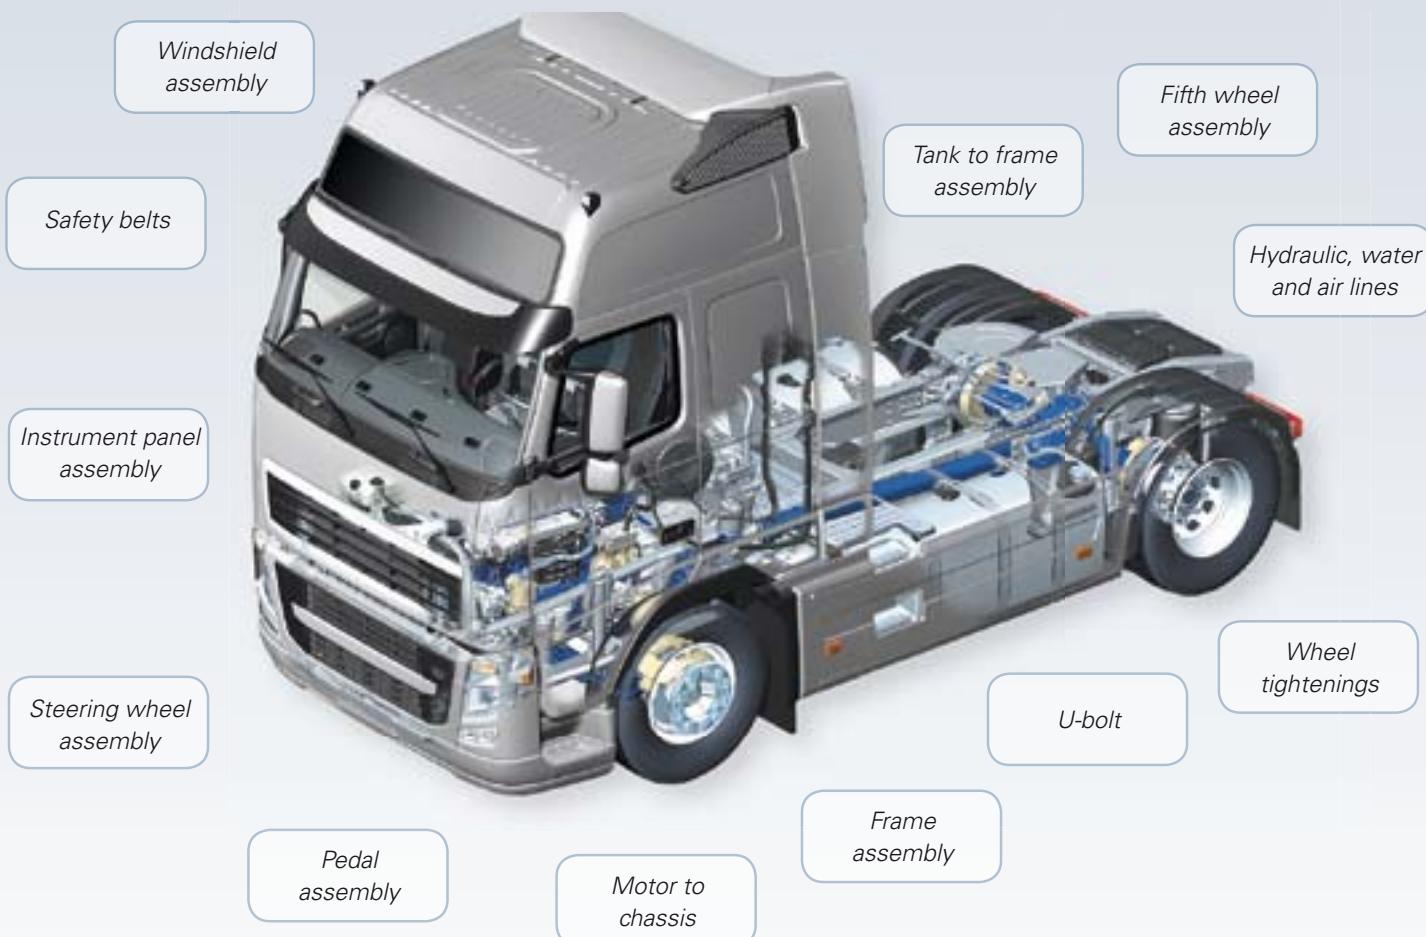

Choose the right tightening strategy

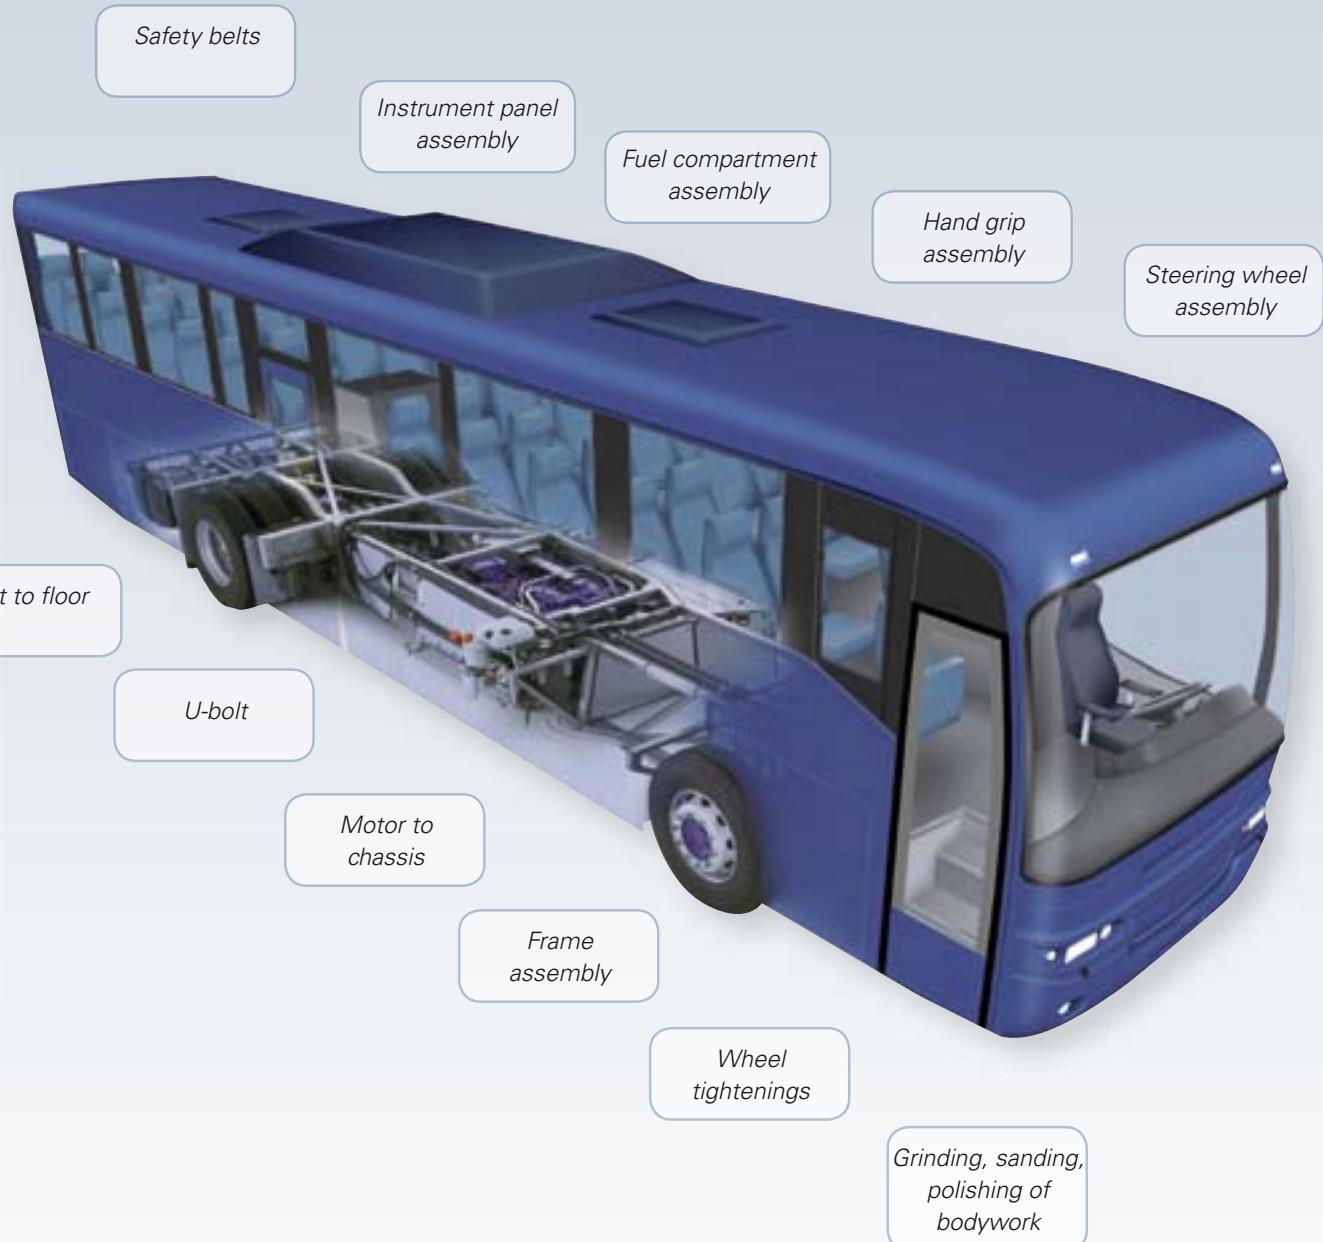

On truck and bus assembly lines it is important to decide which application will be a safety critical, a quality/function critical or non quality critical application. This is in order to select the correct tool and tightening strategy for the application. The tightening strategy guides the process of applying the right torque to the selected bolt to achieve the correct clamp force.

A normal truck is assembled using some 4,000 screws. If a customer wants to save weight it is possible to specify smaller screws with a higher bolt grade. This will save a lot of weight, but the bolt requires a tool which can deliver a high level of accuracy and which can be adjusted to different tightening strategies.

If you have any doubts or questions about the joints in your production, Atlas Copco's Advanced Fastening Technology Team will support you and suggest the right tightening method.

Safety critical?

Your challenges are our business

Raising productivity Atlas Copco pneumatic and electric handheld and fixtured assembly tools are fast and powerful with the capability to help remove bottlenecks and streamline your production. Optimize your production line with advanced tools and technical support from Atlas Copco. We can show you how to achieve a major increase productivity without investing in expensive new production lines, production facilities and special plant engineering and construction.

Quality that contributes to safety The trend in assembly is to use fewer bolts in order to reduce costs and weight. This means that tightening quality is even more important. Choosing the right tools will help ensure optimal product quality. With Atlas Copco advanced tightening tools the correct torque is applied by choosing the right tightening strategy. Correct torque ensures that the joint will not loose when the product is in use. For safety critical applications, Atlas Copco has advanced handheld and fixtured tools offering joint validation and traceability.

Tools you can work with all day long Our ergonomically designed handheld assembly and material removal tools offer high power to weight ratios with low noise and vibration levels. Designed with operator health and safety in mind, they help raise individual productivity in your plant.

An example of what Atlas Copco can do for your production line

The takt time in a truck assembly operation at one of Germany's largest truck manufacturers was around 21 minutes. After consulting Atlas Copco, the line was restructured and new, state-of-the-art Atlas Copco tools were added. It was then possible to cut the takt time to 12 minutes. A second larger investment in tooling from Atlas Copco and a restructuring of the process for time-critical applications improved the tact time further – down to 8 minutes.

Previously, this manufacturer built 10,000 heavy trucks per year in one line. Today he is building more than 20,000 trucks per year in the same line – a production increase of about 100%. The new target is 6 minutes per takt.

Challenge us to optimize your production and speed up your line.

Get it right first time

Six steps to zero-fault fastening

Step 0. There is no torque specified

Operator only need to tighten the parts together. This could also be pre tightening. Totally operator depending tightening.

Step 1. To assure a correct tightening torque

The first step to zero fault production is obtained by using an assembly tool that delivers a precise and pre-determined torque. However, only the tightening torque is controlled at this first step, operators and workpieces are not yet involved in the monitoring process.

Step 2. To assure that all screws are tightened

One of the most common causes of a faulty assembly is the fact that the operator simply forgets to tighten a screw or makes a re-hit on an already tightened screw. The remedy against this possible error is to use a controlled tool. It monitors the tightening cycle and identifies a proper shut-off of a tool.

Step 3. To assure that the joint is correct

With step 1 and 2 the tool and the operator have been taken into consideration. However, the joint itself can also be a cause of the incorrect tightening. There can be several reasons for this. Missing parts like seals or washers will change the characteristics of the joint. Damaged threads or debris in the joint also

leads to an improperly tightened joint. The way to detect these types of faulty joints is to monitor the tightening angle during the tightening process. Operator guidance and feedback is provided by signal lights on the tool and by using socket selectors etc.

Step 4. To assure that safety critical joints are tightened properly

This is the level required for safety critical joints. All tightening data is documented and can be retrieved for error analyses, thus offering full traceability of the tightening operation. Documented tightening data for safety critical fasteners are essential in order to avoid or limit recalls and warranty claims.

Step 5. To assure zero fault production

With step five two further elements are introduced for fault-free production. One element is the introduction of part identification, the other is reject management. With step five the tool controllers are not only networked – they are also connected to the factory network. Information about the components is sent over the factory network. By identifying the components that are to be assembled, relevant information is transferred to the tool controller via the network. This safeguards both that the correct component is being assembled and that corresponding tightening parameters are chosen.

Choose the right tool for the job

As joint fastening grows more complex, error proofing becomes a key factor for the profitability of your operation. The later an assembly defect is identified, the more it costs to correct further down the line. At worst, it could reach the end-customer and result in warranty claims and loss of goodwill. Leading the field for tightening process control, Atlas Copco has defined six steps towards zero-fault fastening.

Step 5

To assure zero fault fastening.

Is this what your operators are thinking?

Can I apply the right torque to a joint with an impact wrench? What happens when the torque is too low and the tightening does not create enough clamp force? Does the joint loosen every time?

When I use the impact wrench, every time I perform a tightening, I have to go one "click" more. This is very time consuming and my shoulders are aching.

If I holding down the trigger of the impact wrench for a shorter time because I don't like the vibrations into my hand, will this affect the torque applied to the joint?

In the morning the pressure to the tool was 6.0 bar. Now the air pressure has dropped to 4.5 bar. Does this affect the torque result? How long should I press the tool trigger?

Can I apply the right torque with an impact wrench to the safety belt joint? What happens, if I damage the joint? Can I see or feel it?

The chassis has been sent to the next station and one bolt that I should have tightened is left! Did I forget to tighten this joint? Is there a system which can count tightenings?

Oh, I used the wrong length of the bolt and the head sticks out a little bit from the hole. Will this affect the function of the part?

The impact wrenches are very loud. Every evening I have a headache.

I do my best but the quality is not high enough. How is it possible to trace back my tightenings?

Every time I perform a tightening I'm supposed to check the torque with a click wrench! My shoulders are aching and I don't always do it.

I'm using the click wrench. The nut doesn't turn. Is the torque correct, or did I overtighten it? What can happen when the truck is on the road?

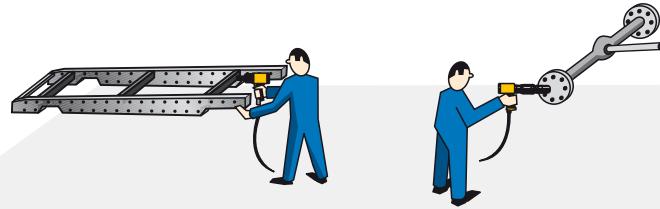

My impact wrench takes a long time to build up torque and then I have to check the torque with a click wrench. Is there a tool that replaces an impact tool in combination with a click wrench?

I don't like vibrations or reaction force into my hand and wrist. Is it possible to use a supported tool that eliminates the forces acting on my body?

Ramp up your production

Production steps

1. Chassis assembly

Tools in use: Impact wrenches.

Upgrade option 1:

ErgoPulse pneumatic pulse tools, or LTP pneumatic shut-off tools.

Upgrade option 2:

Tensor straight or pistol grip electric shut-off tools.

2. Truck axle: Assemble holder to axle

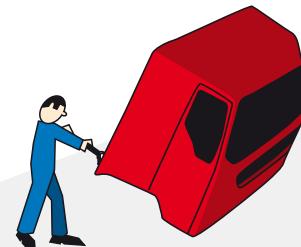

Tools in use: Impact wrench plus click wrench.

Upgrade option 1:

ErgoPulse pneumatic pulse tools, or LTP pneumatic shut-off tools.

Upgrade option 2:

Tensor DS in-line electric shut-off tools, or QST fixtured nutrunners.

7. Driver's cabin: Safety belt

Tools in use: Impact wrench plus click wrench.

Upgrade option:

Tensor ST electric shut-off tools, or Tensor STB cordless battery powered tools.

8. Driver's cabin: Airbag

Tools in use: Impact wrench plus click wrench.

Upgrade option:

Tensor ST electric shut-off tools, or Tensor STB cordless battery powered tools.

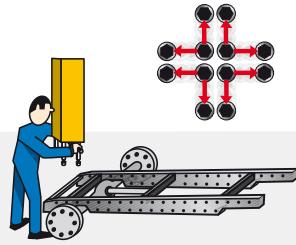

9. Driver's cabin: Steering wheel attachment

Tools in use: Impact wrench plus click wrench.

Upgrade option:

Tensor STB cordless battery powered tools, Line Wrench.

Production – now!

3. Axle to chassis assembly (U-bolt)

Tools in use: Impact wrench plus click wrench.

Upgrade option:

Fixture multiple spindles, Tensor ST or QST.

4. Motor: Attach cooling system to motor

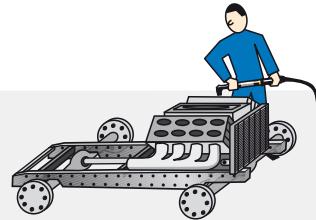

Tools in use: Impact wrench

Upgrade option 1:

LTV pneumatic shut-off tools.

Upgrade option 2:

Tensor ST electric shut-off tools.

5. Motor: Attach gearbox to motor (flange)

Tools in use: Impact wrench plus click wrench.

Upgrade option:

Tensor ST 10 electric shut-off tools.

6. Attach motor with gearbox to chassis

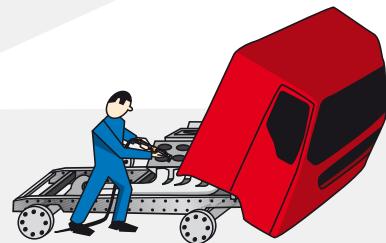

Tools in use: Impact wrench plus click wrench.

Upgrade option 1:

LTD or LTP pneumatic shut-off tools.

Upgrade option 2:

Tensor ST 10 or Tensor pistol grip electric shut-off tools.

10. Attach cabin to chassis

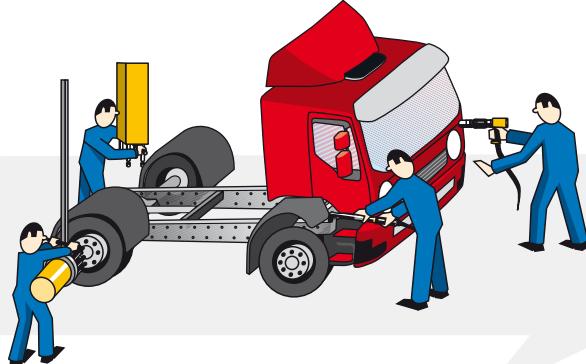

Tools in use: Impact wrench plus click wrench.

Upgrade option 1:

LTP, LTV, LTD pneumatic shut-off tools

Upgrade option 2:

Tensor electric shut-off tools (ETP, ETD, ETV).

12. Wheel attachment

Tools in use: Impact wrench plus click wrench.

Upgrade option:

Fixture multiple spindles, Tensor QST.

11. Attach cabin to chassis

Tools in use: Impact wrenches.

Upgrade option:

Tensor electric shut-off tools (ETD, ETV) plus articulated arm.

13a. Road semi-trailer attachment (5th wheel)

Tools in use: Impact wrench plus click wrench.

Upgrade option:

Fixture multiple spindles, Tensor ETX, QST plus Crowfoot.

13b. Or trailer coupling attachment

Tools in use: Impact wrench plus click wrench

Upgrade option 1:

LTP pneumatic shut-off tools.

Upgrade option 2:

Tensor pistol grip electric shut-off tools.

14. Spare wheel attachment

Tools in use: Impact wrenches

Upgrade option:

ErgoPulse pneumatic tools, or LTP pneumatic shut-off tools.

Screwdrivers step 1

To ensure the highest level of productivity in your plant, Atlas Copco offers two ranges of advanced screwdrivers. Our LUM pneumatic screwdrivers are state-of-the-art tools offering high accuracy, wide torque and speed ranges and operator friendly ergonomic designs. These tools are complemented by our BCP battery clutch pistol-grip screwdrivers, which set you free from cables or hoses! Fast and powerful with superior ergonomics, BCP tools offer maximum accessibility and high productivity for your quality critical assembly operations.

APPLICATION EXAMPLES

- HOSE CLAMPS
- HOLDERS FOR HOSES AND CABLES
- INTERIOR ASSEMBLY

Pneumatic screwdrivers

Wide torque and speed ranges

The LUM screwdriver program comprises three basic models LUM 12, 22 and 32, which are available in pistol grip, straight and angle versions in a large number of variations in terms of torque and speed. Our light, well-balanced LUM tools offer you high power output in relation to size, low reaction force and handles in insulated materials that are comfortable to hold. Your operators can work with them all day with minimum strain.

LUM 32 – high torque, maximum accessibility

Take the LUM 32, for instance. Weighing in at just 0.75 kg, this high performance pneumatic screwdriver generates an impressive 15.5 Nm of torque. LUM 32 screwdrivers also incorporate a "slimline" powertrain, complete with new gear package and clutch. You'll find that their new, slim bodies make them ideal for use in confined spaces.

Easy on the operator

By giving low inertia, the lightweight clutch in the LUM series ensures ultra-rapid shut-off, thus minimizing the reaction pulse felt in the operator's wrist, and making a major contribution to operator comfort.

Built for productivity

With its ergonomic design, lubrication-free powertrain, patented silencer, low-maintenance design and exceptional reliability, LUM tools minimizes operator strain and boosts individual productivity.

Pneumatic and battery tools

Battery screwdrivers

Freedom from cables and hoses

Available in seven models covering the torque range 0.8 – 12 Nm, Atlas Copco BCP battery clutch pistol-grip screwdrivers are ideal for low-torque joints in final assembly of buses and heavy trucks. With a BCP screwdriver there are no cables or hoses to get in your way and the slim, well-balanced design, light weight and ergonomic pistol grip make it a pleasure to hold.

Choose the optimal speed for your assembly

With a speed range of 150 – 1,550 rpm, the BCP is the fast, most versatile battery screwdriver on the market. Best of all, the speed can be programmed for your application simply by attaching a speed-setting unit to the tool.

Feedback to the operator

A BCP screwdriver keeps you informed. It shuts off automatically at the preset torque and OK and not OK tightening results are indicated by green and red lights on the LED. This also shows the status of the battery.

Lithium-Ion battery technology

BCP screwdrivers are powered by light, high-capacity Lithium-Ion batteries that provide an impressive number of tightenings on one charge! There is no memory effect so they can be recharged at any time.

LTP/LMP pistol grip nutrunners *step 1-2*

If you need a higher level of accuracy in your heavy truck or bus production, take a look at Atlas Copco's LTP shut-off nutrunners. They have become standard tools at truck manufacturers such as Scania and Volvo. A "stall-type" version, the LMP, gives you maximum manual control over the tightening process.

APPLICATION EXAMPLES

- CHASSIS ASSEMBLY
- BACK UP FOR WHEEL
- TRAILER COUPLING
- SPARE WHEEL
- AXLES

Two-speed tightening for speed and accuracy

For maximum productivity, a pistol-grip nutrunner should provide fast rundown and precision tightening. LTP/LMP twin-motor nutrunners, incorporate a high-speed motor for rapid, smooth rundown, and a low-speed high-torque motor for precision tightening.

Believe it or not, our twin-motor concept is lighter, more powerful and more compact than a single-motor unit.

Ten times faster rundown

A conventional, mid-size shut-off nutrunner works at around 20 rpm, during both rundown and tightening. A mid-range LTP 61 runs down at 210 rpm – 10 times faster.

If you have a large number of nuts to tighten, the LTP 61 will save you a considerable amount of time, boosting the productivity of your company.

Ergonomics – our area of expertise

Comfortable to hold and deceptively light, LTP/LMP nutrunners possess an exceptional power-to-weight ratio, steplessly generating 55 to 4,000 Nm of torque. Compact design, optimal balance and a 360° multi-adjustable torque-reaction bar ensure that any strain on your wrist and arm is kept to a minimum.

Noise and vibration levels are exceptionally low, and operator comfort is further enhanced by piping exhaust air through the pistol grip. Operators who progress from impact wrenches really appreciate the difference.

Pneumatic tools

Use one LTP 61 for a wide range of different jobs.

Multi-Torque Selector

Transform one nutrunner into four: the Multi-Torque Selector allows you to preset four different torque levels per tool.

Reaction bars, examples

Multi-Point Reaction Bar

In many workshops, an application that requires a different torque also requires a different reaction point. The Multi-Point Reaction Bar features a sliding bracket that gives you a number of different reaction points.

S-Bar – straight out of the box

A blank reaction bar has to be bent, cut or welded. The geometry of the S-Bar has been optimized to provide a maximum number of reaction points. This means you'll be able to use the S-Bar in about 70 – 80% of all applications straight out of the box.

For more reaction bars, see page 57.

LTP 61 shut-off nutrunner with multi torque selector
up to 4 different torque levels
Torque range: 55 – 3,800 Nm
Speed range: 50 – 1,800 rpm

LTP 61 shut-off nutrunner
Torque range: 55 – 3,800 Nm
Speed range: 50 – 1,800 rpm

LMP 61 non shut-off nutrunner
Torque range: 60 – 4,000 Nm
Speed range: 60 – 2,200 rpm

LTV angle nutrunners *step 1 - 2*

The LTV 8 series is a range of high performance, angle nutrunners offering high speeds, extended torque range, operator comfort and long service life. LTV 69 nutrunners are helping to raising productivity in heavy truck and bus plants around the world. Tools in the new, extremely powerful Atlas Copco LTV 9-2 series combine up to 50% higher speed and consistently high accuracy with operator-friendly features. The new LTV 9-2 series can speed up your production even further.

Combining performance with reliability

A valuable addition to the tool population in your heavy truck or bus manufacturing plant, these advanced tools offer a unique combination of outstanding performance and traditional reliability, in a breakthrough design with innovative and effective features.

Speed and accuracy

Despite its compact design, the LTV proves it can deliver the right performance the moment it goes into action. It offers speeds of up to 1200 rpm, with consistent, high tightening accuracy under $\pm 10\%$ over 6 sigma. The LTV gives low mean shift, torque level remains stable regardless of joint conditions. Error proofing is possible by a built-in RE signal.

Light on the operator

With their high power-to-weight ratio and accuracy in an operator friendly design, tools in the LTV 9-2 series are popular with operators. Their slim, lightweight design, durable long-life grip and low reaction force make them exceptionally comfortable to use. The extra small anglehead gives optimum accessibility.

APPLICATION EXAMPLES

- CHASSIS ASSEMBLY
- MOTOR ASSEMBLY
- HOLDERS FOR PIPES AND CABLES

Easy to operate

Setting or adjusting the torque on an LTV 9-2 is simple and the tools are easy to reverse using the new aluminum reverse ring. A built in safety feature prevents the operator from changing the direction of rotation while running the tool.

Built for tough jobs and long service lifetime

LTV angle nutrunners are robustly designed to handle tough jobs and long service intervals, year in, year out. Trials have shown that they take the strain off your operators and just keep on performing through a long, trouble-free service lifetime.

Pneumatic tools

Increase speed by up to 50%

By using an LTV 9-2 series nutrunner you can increase speed by up to 50%. Assuming a time saving of 40 minutes per day and a labour cost of \$50 per hour, the payback period for a new LTV tool would only be 3 months! This should help you to convince you that the new LTV 9-2 nutrunner is a sound investment.

Fast and powerful

With a capacity range of 70 – 600 Nm, the LTV 69 is the fastest, high capacity pneumatic nutrunner on the market. Based on the well-proven, Atlas Copco twin motor concept, the LTV 69 provides fast run-down and torque-up with exceptional accuracy. Reaction bar mounting is included. Despite its impressive power, the LTV 69 is compact and lightweight enough to be used in many cramped spaces where other tools fail.

Low air consumption translates into major energy savings!

In a typical assembly plant, with tools in operation all year round, the considerably lower air consumption of LTV 9-2 nutrunners translates into huge energy savings annually.

Imagine, the annual cost savings in your plant using nutrunners that consume more than 30% less energy. The unmatched energy efficiency of LTV 9-2 nutrunners will reduce your production costs and make a major contribution to recouping your initial tool investment. In the long-term they cost you no more than less expensive tools.

Pulse tools step 1 - 3

Atlas Copco ErgoPulse tools will help you meet your productivity goals. Their reliability, accuracy and heavy duty construction, combined with their operator-friendly ergonomic designs, make them ideal for continuous production in heavy truck and bus plants. Available in automatic shut-off and non shut-off versions, there is also the amazing Pulsor offering the advantages of a pulse tool, with the intelligence of an electronic nutrunner.

ErgoPulse tools offer high torque with stable torque output

The twin chamber vane motor is designed to generate high torque at low speed. The oil compensation volume keeps the oil volume stable, even at very high cycle rates, ensuring stable pulse pressure in pulse unit.

Comfortable to operate

In ErgoPulse tools power-to-weight ratios are impressively high. Since there is no metal-to-metal impact, it provides a more controlled pulse with considerably less vibration and noise than an impact wrench.

Low maintenance, long working lifetime

ErgoPulse tools use a camshaft and piston arrangement and, thus, contain no springs. The camshaft, the guided pistons and the durable rollers are immersed in oil, ensuring minimum wear and a long service life.

APPLICATION EXAMPLES

- SPARE WHEEL ATTACHMENT
- BACK UP TOOL FOR WHEEL TIGHTENING
- CHASSIS PRE ASSEMBLY TOOL
- DOOR HINGES ASSEMBLY
- BUMPER ASSEMBLY

ErgoPulse PTS and PTX automatic shut-off tools

ErgoPulse PTS and PTX tools give you short cycle times, precision tightening and a top quality result. The pulse mechanism is designed for maximum torque generation and energy transfer. The unique inertia shut-off system allows the tool to tighten at maximum speed and power until final torque is reached.

Find another tool like this one!

With its amazingly high power-to-weight ratio, our most powerful pulse tool, the ErgoPulse 25PTX, gives you torque of up to 900 Nm in a tool weighing just 10.4 kg.

Pneumatic tools

Pulsor C – the impulse tool with electric tool intelligence

Atlas Copco's Pulsor C System gives you all the advantages of a controlled impulse tool, plus the intelligence of an electric tightening system. Like all Atlas Copco impulse tools, Pulsor C is fast, powerful, light and compact and generates virtually no reaction force.

The controller remembers up to 4,000 tightenings that can be stored and analyzed. This enables you to fine-tune your process and ensure that every tightening in every shift is perfect. If they are not perfect, you can see why.

Optimum performance on all types of joints

ErgoPulse PTS and PTX tools are available with either AutoTrim or Standard Trim valve version.

The AutoTrim feature ensures fast tightenings and torque consistency on mixed joints. With StandardTrim the tool's speed and power is manually adjustable and is suitable for extreme joint conditions, such as very hard or very soft joints.

ErgoPulse XS non shut-off tools

ErgoPulse non shut-off tools are the ideal choice when you need high speed and manual control over the tightening process. With torques of up to 400 Nm, ErgoPulse XS non shut-off tools are optimized to provide fast, accurate tightening and long service lifetimes.

Pulsor C
Torque range: 16 – 450 Nm

Pulsor Focus Controller and Tool Control Box

ErgoPulse PTS
Torque range: 6 – 410 Nm

ErgoPulse PTX
Torque range: 2 – 450 Nm

ErgoPulse 25PTX
Torque range: 450 – 900 Nm

ErgoPulse XS
Torque range: 5 – 400 Nm

Tensor DS electric nutrunners *step 3*

Today, heavy truck and bus manufacturers are demanding increased control and reduced errors in their tightening operations. Tensor DS electric nutrunners offer the high performance of more advanced tools at a fraction of the cost. Combined with market leading durability and the flexibility to choose only the functionality needed, it fulfils your requirements.

Available in pistol, angle or straight tools, Tensor DS is the perfect tool to suit any tightening operation. With torques ranging up to 4,000 Nm, it has the versatility and ease of use to ensure that operators are happy, and fastening quality is assured every time.

A pleasure to work with!

Your operators will benefit from the operator-friendly aspects of Tensor DS tools. These include light, compact ergonomic design, smooth, quiet operation, no exposure to air-borne oil vapour. Its attractive combination of accuracy and flexibility positions Tensor DS as a unique solution on the market.

Tensor DS detects the most common assembly problems

Missing fasteners: By simply counting each fastener as it is tightened, Tensor DS ensures that the most common human errors are immediately detected and identified.

APPLICATION EXAMPLES

- CABLE/PIPE HOLDERS
- CHASSIS
- PREVAILING TORQUE APPLICATIONS
- HANDGRIP/HOLDER
- INSTRUMENT PANEL

Incorrect joint conditions: Tensor DS can detect thread defects such as cross threads, stripped threads and incorrect screw length. Even missing components such as washers or gaskets can be detected.

Inconsistent repeatability: Using conventional pneumatic tools, the final torque can vary due to inconsistencies in air pressure, variances in joint hardness, even the type of materials being assembled. With Tensor DS, the right program and strategy is allocated for each condition.

Wrong torque applied: Tensor DS removes the human factor by shutting off at the desired programmed torque whilst ensuring a specified minimum level has been reached. The right result is achieved every time.

Electric tools

Four controllers to choose from

Box: Simple, smart and effective

A cost-effective first step into the world of controlled tightening. DS Box lets you control speed and tightening strategy to ensure that the tool does the job right independently of operator influence. The angle monitoring and bolt counting capabilities help you to detect common assembly errors.

Basic: Extra security with the information you need

The Tensor DS Basic drive is equipped with a keypad for programming. It offers the same advantages as Box with extra security since the operator can see the precise torque value displayed on the controller – instead of just the light on the tool.

Advanced: Optimal quality control with multiple options

With the Advanced solution Tensor DS demonstrates its full range of capabilities. Since it is possible to use 10 different Psets, the same tool can be used for several applications. Also, in addition to controlled tightening you can add error-proofing modules such as stack lights or alarms for increased operator feedback.

Power Focus: A common solution for any level of complexity

By adding the Power Focus software key, Tensor DS is ready to go with functionality normally seen only in more expensive systems. Power Focus does it all and a lot more besides, providing a common platform for use throughout any assembly plant. Read more about the Power Focus 4000 controller on page 26.

Tensor ST electric nutrunners *step 4-5*

As a heavy truck or bus manufacturer, with Tensor ST tools you can be sure that your product is built to the correct specification, every time, and that you will not let your customers down or damage their reputation. Available in pistol, angle or straight tools, it would be difficult to find another tool that can match Tensor ST for its combination of productivity, ergonomics, error-proofing and low maintenance.

The motor is the key

The key to the tool's impressive performance is the high-efficiency motor which does not require fan cooling. The advanced design gives up to 30% higher torque and higher output speed, whilst running at low temperatures.

With the risk of overheating eliminated and fewer parts, the Tensor ST is an extremely reliable tool.

Spiral gears – durable and accurate

Tensor ST angle tools use the proven Atlas Copco spiral gear design, which utilises the maximum gear surface contact to produce best performance and longest possible service life. In the Tensor ST, the spiral gear design has been improved and is now even more accurate and durable, ensuring reduced maintenance costs.

APPLICATION EXAMPLES

- SEAT TO FLOOR
- SAFETY BELT
- STEERING WHEEL
- FUEL TANK ASSEMBLY
- CHASSIS ASSEMBLY

Visual and audio feedback

The Tensor ST is equipped with four signal lights, including a blue LED which can be configured, for example, to indicate when a batch of screws have all been tightened.

Yellow and red LEDs ensure immediate detection of NOK fasteners, direct at the point of failure. The tool can be configured to emit sounds that alert the operator immediately and indicate different events, work tasks, or fastening status.

Comfortable to operate

The ergonomically designed handle is an integral part of the tool and is unique in tools of this torque range. The two finger trigger and twist reverse ring allow easy and intuitive use wherever the tool is being operated

Electric tools

Proven transducer

Tensor ST has a built in torque transducer which allows best possible tightening accuracy whilst ensuring that all tightening data can be recorded. This information is sent digitally to the controller where it can be utilised for process improvement, quality assurance or documented traceability.

Easy fixture integration

Tensor ST provides all the benefits of a hand tool, yet has been designed with fixturing in mind. Easy integration into the assembly line is vital. With no need for special mounting brackets or torque reaction plates, Tensor ST is the easy way to introduce a controlled high torque nutrunner to your assembly operations.

Power Focus 4000 controller

Tensor ST nutrunners can be partnered with the Power Focus 4000 controller (see page 26) which supports "zero-fault" production by providing numerous tightening strategies, job work sequencing, full data traceability and networking capabilities.

Tensor ST angle tool
Torque range: 1 – 600 Nm
Speed range: 150 – 2,400 rpm

Tensor ETP STR61 pistol grip tool
Torque range: 5 – 125 Nm
Speed range: 380 – 2,100 rpm

ETV STR21 angle tool
Torque range: 2.5 – 25 Nm
Speed range: 1,000 – 1,350 rpm

Tensor ST straight tool
Torque range: 30 – 1,000 Nm
Speed range: 100 – 870 rpm

Power Focus 4000 controller

Tensor STB battery nutrunners *step 4-5*

Available as angle or pistol grip tools, Tensor STB nutrunners give you true cordless freedom! First, they are battery powered. Second, they use Industrial Radio Communication (IRC) to communicate with a controller, giving you full process control. In other words, Tensor STB tools offer the same benefits and zero-fault process control as Tensor ST nutrunners.

Critical joints demand not only validation and documentation, but speed and accuracy. However, tool cables limit smooth movement along the line and cause access problems in cramped spaces. This is particularly attractive for the operator working on moving lines or at rework stations with many different tightening positions

Unique fastening performance

There are other battery tools on the market. However, no other battery powered tool can offer Tensor STB's unique fastening performance and advanced process control.

Superior ergonomics

With no cord in the way, the operator works unhindered in ergonomical positions which result in reduced fatigue.

APPLICATION EXAMPLES

- DOOR HINGES
- STEERING WHEEL
- SEAT BELTS
- SEAT TO FLOOR

All-round player

At a typical workstation, one Tensor STB tool can be used for several applications within the same torque range. In some applications you can use one Tensor STB for both sides. If you have different joint types, it is recommended to use an STB with a socket tray.

Higher productivity

Tensor STB offers genuine ergonomic advantages for the operator which in turn raises individual productivity.

- Low tool weight and high spindle speed reduce cycle time
- Awkward working positions caused by the cable are eliminated
- Lightweight components help reduce operator fatigue

Electrical wireless tool

Better operator feedback

The operator is kept well informed by the tool. For example, if a tightening error occurs the operator will be alerted and can take immediate action, thereby avoiding the expense of reworking.

IRC – industrial strength

Atlas Copco has developed special communication technology that is designed for industrial environments. Industrial Radio Communication (IRC), as we call it, is based on Bluetooth 2.0. IRC is also equipped with AFH (Adaptive Frequency Hopping). With this spread-spectrum technology the transceivers hop from one frequency to the next at fixed time intervals. A major advantage of this design is that it offers a more robust link, especially in noisy environments.

Less parts in stock

Since no cables are required, there are no cables to keep in stock. In addition to this, Tensor STB shares many of the components and accessories used in Tensor ST. And by eliminating dirty cables, your end-products remain clean.

Tensor STB – a complete tightening system

Tensor STB nutrunners can be partnered with the Power Focus 4000 controller (see page 26) which supports “zero-fault” production by providing numerous tightening strategies, job work sequencing, full data traceability and networking capabilities.

Tensor STB angle tool
Torque range: 4 – 50 Nm
Speed range: 375 – 1,500 rpm

Tensor STB pistol grip tool
Torque range: 2 – 12 Nm
Speed range: 750 – 1,500 rpm

IRC

Power Focus 4000 controller

QST/ETX fixtured nutrunners *step 4-5*

Designed for large-scale, heavy duty tightening, ETX and QST fixtured nutrunners are compact, durable and easy to integrate in your heavy truck or bus production line. These rugged tools are designed to give you a long working lifetime and high accuracy in heavy duty applications.

QST tools with Power MACS 4000

Speed that raises productivity

Based on the success of its predecessor, the QMX, the new QST nutrunner offers a speed increase of up to 67%. Inertia braking allows nutrunner to run faster without overshooting. The tightening controller automatically increases the bus voltage for the larger size nutrunners, QST80 and 90, giving unique speed capabilities for high-torque applications.

Accurate and easy to maintain

The QST delivers an accuracy of +2.5% after one million cycles, creating longer service intervals.

A simple, easy-to-install sandwich/pilot mount allows flexible maintenance possibilities. The QST is available with extended spring travel (76 and 100 mm) and/or extended socket holder length.

Built-in memory chip

An electronic chip stores data including calibration value, serial numbers and maintenance intervals, thus reducing costs and errors.

APPLICATION EXAMPLES

- WHEEL MULTI
- 5TH WHEEL
- U-BOLT
- CHASSIS ASSEMBLY
- MOTOR TO CHASSIS

Hot Swap function

You can replace the cable or spindle without turning the power off. The cable connector is adjustable in two directions for optimal cable management.

Power MACS 4000

Compatible with QST spindles, the new Atlas Copco Power MACS 4000 controller represents the pinnacle of automated fastening control and a new generation of upgradeable controller. Intuitive monitoring and communication capabilities combined with advanced management programs allow processes to be fine-tuned and productivity hurdles to be overcome. Built in PLC, E-stop and Reject management. Designed for multiple solutions. Digital communication with 12 mm cable Ø, up to 60 m tool cable possible.

Fixture spindles

ETX tools with Power Focus 4000

Functionality and flexibility

ETX spindles are designed exclusively for fixtured applications and optimized for extreme functionality, flexibility and low space requirements. Controlled by a Power Focus 4000 controller and featuring a "smart" memory chip for calibration and service data, the ETX combines the same advanced control and monitoring options and high productivity as the Tensor S range.

Durability and precision

ETX spindles are extremely durable. They are built to last and to continue giving precision tightening in the toughest environments, with high duty cycles and high production rates. ETX is rated up to A10, with a torque accuracy of $\pm 2.5\%$ over 1,000,000 cycles.

Optimized for integration

ETX makes life easy for application engineers. There are various ways to fixture the front end of the tool. With a sandwich mount, for easy exchange of the socket holder, or a pilot mount direct onto the front end. Its compact planetary gear minimizes center-to-center distances, for greater flexibility when placing the spindles in the power head.

Power Focus 4000

The Power Focus 4000 is an advanced control system for the complete range of Atlas Copco electrical assembly Tools (see page 26 for details).

QST fixtured nutrunner

Torque range: 0 – 1,000 Nm
Speed range: 130 – 2,000 rpm

Power MACS 4000 controller

ETX fixtured nutrunner

Torque range 6 – 950 Nm.
Speed range: 70 – 2,000 rpm

Power Focus 4000 controller

Power Focus 4000

With your productivity in mind, we present the futuristic Power Focus 4000 control system for Tensor tools. It will give you full tightening documentation and traceability for safety and quality critical joints, and put your plant securely on the path to zero-fault production.

APPLICATION EXAMPLES

■ THE POWER FOCUS 4000 CAN RUN DIFFERENT TYPES OF TOOLS, SUCH AS TENSOR S, DS, ST, STB AND ETX.

Traceable, zero-fault process control

Advanced control functions built into the Power Focus 4000 prevent the operator from deviating from the required process. When it receives assembly information, the programmed "Job" function automatically selects the correct tightening sequence and parameters. When combined with barcode scanning for component identification, the "Job" function offers traceable, zero-fault process control.

Power Focus 4000 Graph with full-colour display

On the Power Focus 4000 Graph the easy-to-read LCD colour display gives you all the information you need. Statistical data is collected, analyzed and presented on the screen. Changes and trends in the assembly process are indicated by diagnostics and statistical alarms, such as SPC monitor charts and capability (Cpk) alarms.

Power Focus 4000 Compact

The Power Focus 4000 Compact has a basic operator interface with a six-button keyboard and LED display. Pre-programmed using ToolsTalk PF and with a PC as the interface, it offers the same functions as the Graph.

Plug & Play software functionality

There are four standard software levels for the Power Focus 4000: DS, Bronze, Silver and Gold. With Atlas Copco's patented plug-in Rapid Back-up Unit, RBU, a combined program back-up unit and functionality key, you can tailor a hardware/software combination to your specific application.

Controller software

Built-in PLC functionality eliminates problems

The advanced Power Focus 4000 has an integrated Logic Configurator providing basic PLC functionality as an integrated part of the controller, without additional hardware components. You can now configure your "PLC style" signal flow between the line or the fixture, and the PF 4000, thus the need for an interface PLC is eliminated.

Drills, grinders, sanders and polishers

The tools in Atlas Copco's advanced range of pneumatic drills, grinders, sanders and polishers are ideal for a long list of bodywork finishing tasks in heavy truck and bus manufacturing plants. Common to all the tools are their ergonomic designs and high power-to-weight ratios. This is particularly true of the amazing GTG 40 Turbo Grinder. Try running this one to a standstill!

Drills

Drills are widely used in bus building and with Atlas Copco drills the result becomes excellent. Various materials such as composites and steel call for drills with high power and the intensity in the process makes our line of drills the clear choice for the operator. To efficiently drill 1,000's of holes in bus body panels require drills with high productivity which is the reason to why Atlas Copco is the preferred brand in many bus factories. The risk for water leaks from holes drilled in the roof out of tolerance is minimized by using drills with low run out. A full range of speeds and power classes makes it possible to use the right tool for the right job.

LSV Angle Grinders and Sanders

Tools that won't tire you out!

Atlas Copco's LSV 18, 28, 38 and 48 series of grinders and sanders are characterized by their good ergonomics. They are lighter than a conventional vertical grinder, yet much more powerful.

APPLICATION EXAMPLES

- BODY PANELS
- CHASSIS
- FIXING FLOOR
- INTERIOR

To help reduce operator stress and fatigue, many LSV models are equipped with an autobalancer that reduces vibrations in the grinder. All models have textured non-slip grips that are comfortable to hold. Piped-away rear exhaust leaves you with a cleaner working environment.

Efficient pneumatic motors

The efficiency of the air motors in the LSV range ensures consistent performance, even when the grinder is connected to a long hose. With 1,300 W output at 3 meter hose length, you still get good output with a much longer hose.

Long service life

The new, extra durable angle gear is nearly maintenance free, ensuring you many years of excellent service. All LSV angle grinders and sanders have sealed angle heads ensuring long service intervals and troublefree operation for many years.

Material removal tools

LST Sanders/Polishers

A full range of random orbital sanders

LST 20, 21 and 22 sanders are highly efficient tools for sanding before painting and surface coating, and for polishing with wax and surface conditioner. The full range includes standard models and extraction models.

Comfortable to work with

The LST range is made up of compact tools with low height and weight. All models are well balanced and have a vibration level below 2.5 m/s². The housing allows both straight grip and a cross grip. A smaller housing cover, easily exchangeable with the standard cover, is included with each tool.

GTG 40 Turbo Grinder

High rate of material removal

Grinding welding seams on truck or bus bodies? The GTG 40 Turbo Grinder is just what you need. With a turbo-driven motor giving 4.5 kW of power in a grinder weighing only 4 kg, you'll achieve a higher rate of material removal than ever before – with far less effort!

Turbo-powered productivity

The turbine motor is more efficient than the conventional grinder motor, therefore it takes less time to do the same job. Thus boosting productivity in your plant. Also the total air consumption will be a lot less for a specific job.

Drills

Power: 0.11 – 0.83 kW

LST sanders/polishers

Power: 0.2 – 0.3 kW
Pad size 90 – 150 mm

For more information about grinders, see our main catalogue, "Industrial Power Tools".

Atlas Copco air line accessories

Atlas Copco offers top quality accessories with guaranteed reliability. They are designed to ensure correct air pressure and maximum tool performance. Each component is tested and selected for its low pressure drop characteristics.

- Productivity – Atlas Copco quick couplings provide low pressure drop and higher tool power, plus one-handed operation for fast tool changing.
- Quality – For consistent torque accuracy, your Atlas Copco airline system will have a reliable pressure regulator and minimum pressure drops at critical workstations.
- Energy savings – Reliable pressure regulators, the correct size hose and high quality accessories will minimize leakage, eliminating energy losses.
- Ergonomics – Atlas Copco's range of ergonomic accessories take the strain off the operator without impairing the air flow in the system.

Time to upgrade your air distribution system?

Atlas Copco pneumatic tools work best at the design pressure of 6.3 bar (90 psi). Any pressure less than 6.3 bar (90 psi) decreases tool power. A pressure loss of 1 bar (15 psi), for example, reduces the power of our LSV 28 grinder by more than 15%. By upgrading their air distribution system with Atlas Copco air hose assembly and new high quality couplings, a large customer in Australia boosted productivity by 30%.

Avoid sub-standard nipples, poor quality couplings, under-dimensioned hose, and badly designed safety devices. They can cause restrictions or leakage in your air distribution system. Subsequent loss of pressure leads to reduced tool performance and lower torque accuracy, affecting productivity and quality. It also wastes energy. Atlas Copco offers the highest quality air line accessories.

Compatibility of Atlas Copco couplings

Did you know that:

- A well-designed air distribution system has leakage of no more than 5% of its total capacity.
- Pneumatic tools normally give best performance at a dynamic pressure of 6.3 bar. Tools working at only 3 to 4 bar, lose 30 – 50% of their performance.
- Torque accuracy depends on maintaining constant air pressure.

Quality assurance in tightening

Assuring quality throughout the product cycle

In the heavy truck and bus manufacturing industry, demands on safety and quality are increasing all the time. Problems related to tightening account for a growing percentage of total warranty costs. Poor quality in the assembly area can also result in damaged brand image for the manufacturer. Atlas Copco QAT is a program of solutions for assuring tightening quality throughout the product cycle and for maintaining optimum tool accuracy during production.

The Atlas Copco ToolStation

Identify and solve problems early on in the product cycle. The Atlas Copco ToolStation is a mobile station equipped with production tooling and dedicated software for guidance, documentation, traceability and evaluations.

A valuable production tool, the ToolStation makes it possible to use production tooling where it is not usually available, to identify and solve problems from the design, prototype, and pilot build stages, through to serial production. In full production, it is ideal for production cell build, for use as back-up tooling and in the tool repair station.

Equipped with tools, controllers and fastening application software, the ToolStation can handle an unlimited number of parameter sets and support all fastening applications. It will raise efficiency and cut costs throughout the product cycle.

Solutions for maintaining optimum tool accuracy

BLM joint simulator bench 3860

The BLM Joint Simulator Bench 3860 provides maximum tool evaluation flexibility. DC electric, clutch, impulse and battery tools as well as torque wrenches can be evaluated.

The hydraulic brakes simulate the behaviour of a real joint reproducing the stiffness from hard to soft. This allows the tool to be tested in accordance with VDI/VDE 2647.

Torque tools are tested very quickly on a Joint Simulator Bench without having to remove their sockets. So there is no interference with production. It takes just a few seconds for a periodic statistical control and three minutes to make a machine capability test of 30 samples.

Pneumatic tools are tested directly on the production line under real conditions taking into account air pressure, hose wear, lubrication, etc.

ACTA 4000 takes away the guesswork

ACTA 4000 measures and analyses the tightening performance of any direct-driven or pulse tool, torque wrench or click wrench. It can be used for setting output torque, calibrating tools and making accuracy tests.

ACTA 4000 takes the guesswork out of tightening by providing a full range of functions from simple torque, angle and pulse checks to advanced graphic analysis of tightening.

STwrench

Can be used in production or in your torque lab for joint analyses. You can also use it for quality control and for critical tightening where it allows you to use many different tightening strategies.

IRTT-B in-line rotary torque transducer

The ACTA 4000 automatically reads the memory in the IRTT-B. No manual calibration is needed. Very high readout accuracy. Available in torque or torque/ angle versions.

MRTT-B manual wrench torque transducer

Designed to measure static torque on higher torque applications.

Service

ToolScan RCM

Is your tool service level correct? Based on the Reliability-centered Maintenance (RCM) process, ToolScan RCM enables our service experts to identify your precise needs in terms of tool maintenance.

Too little maintenance means frequent tool breakdowns. Too much maintenance is an unnecessary drain on your budget. For maximum profitability, the relationship between tool maintenance and system failure must be optimized. It's a fine balance which Atlas Copco can help you achieve by optimizing your existing maintenance program, or developing a new one. For more information, please contact your Atlas Copco representative.

Full Coverage Agreement

A complete, tailored maintenance solution with a fixed annual cost, a Full Coverage Service agreement consists of standard service modules designed to secure the availability of your equipment.

The agreement is available when you purchase new equipment, and for your existing tools and spindles after a basic check. It provides a full warranty covering all unplanned repairs, providing the equipment has not been misused.

Thus, throughout the contracted period, there is no risk of unpleasant surprises in the form of costly repairs, and we inform you in good time if and when your equipment needs to be serviced.

Preventive Maintenance Agreement

Preventive Maintenance is our standard recommended maintenance program. Maintenance is performed at the correct intervals based on the age, intensity of use, and application of your tools and equipment.

The work is carried out on your premises or in our central workshop at a fixed annual cost. We also take care of all planning and data storage during the contracted period. Additional work found during maintenance is quoted on a fixed price basis for completion during the next visit, or at an Atlas Copco workshop.

Calibration Services

On the assembly line, you need to be certain about the performance of your power tools and equipment. The tools need to be calibrated at regular intervals.

Our Calibration Services keep your transducerized tools and torque measurement equipment calibrated for optimum performance. We offer a complete range of calibration services. Most Atlas Copco Service Centers are ISO 9000 certified.

Customer training and workshops

We offer a full program of customer training courses and workshops to ensure that you get the most from your tools. These workshops can be held either on your own premises or in our Training Center. Please contact your local Atlas Copco Customer Center.

ToolStart

We offer tool installation and start-up by qualified Atlas Copco engineers at a fixed price. The service also includes: programming, test running and operator training.

Customized solutions

Atlas Copco application centers

Articulated arms and position recognition system

The Articulated Arm concept

Atlas Copco Articulated Arms are designed for use with single-spindle Atlas Copco handtools or smaller multiple-spindle fixtured housings. Good ergonomics remove the strain from the operator, while increasing safety and productivity.

A unique family of Articulated Arms with a wide range of options offers an unparalleled selection of standard, well-proven solutions.

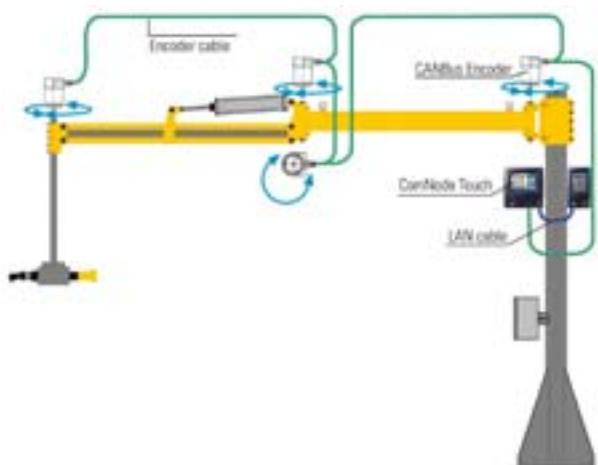

Improving productivity

With demands on productivity constantly increasing, Articulated Arms are a cost-effective way of raising productivity. A stand-alone concept, requiring no overhead rail system or similar, the Articulated Arm provides almost zero gravity support of the tool. It also absorbs the torque reaction, increasing operator comfort and safety.

Adding process security the Atlas Copco way

Error proofing has taken on a new dimension! Atlas Copco Articulated Arms can be equipped with our Position Recognition System (PRS). This tracks the exact position of the tool, ensuring the correct fasteners are tightened to the correct torque, in the correct sequence. PRS offers high level process security for complex assemblies.

Arm size	Torque capacity Nm	Working range mm	Lifting capacity at 6 bar kg
1, 2, 3, 5	50 - 2,000	1,200 - 4,000	40 - 90

Telescopic handtool suspension and installation frames

Telescopic tool suspension

Designed to support Tensor tool applications safely and ergonomically. With near-to-zero gravity and the capacity to absorb high torque reaction, the majority of applications can be solved quickly and effectively, with tried and tested products.

Installation frames

A flexible, cost-effective way to optimize your workstation. These modular, robust installation frames are designed to support the Tensor tool controller and other specific options. There are five different widths available, depending on the size of the workstation, and numerous options to customize them according to the application.

Overhead rail height mm	Torque capacity max. Nm	Stroke mm	Working range from floor mm
2,500 - 3,500	250 - 500	600	900 - 1,400

Multiples by Express®

The smart approach to fixtured multiples

Multiples by Express® from Atlas Copco is a highly flexible, modular system of fixtured multiples that saves time and money when planning or rebalancing a production line. The components are designed to be ergonomic and light without compromising durability. Delivered in as little as four weeks, Multiples by Express® offers full support for lean production.

Full flexibility – simple to upgrade

With Multiples by Express® as many as 10 spindles can be used to tighten up to 1,000 Nm in any predefined modularized multiple.

Tailoring a tightening system to new applications is simple. An existing fixture can be rebuilt to a new proven design using the same parts. You can go from vertical to horizontal to rotating with very little effort. Add a spindle or remove a spindle – it's easy.

When an increase in capacity is required, extra nutrunners can be added to the multiple simply by changing the base plate.

Plug-and-play error-proofing modules

Error-proofing is available in the form of optional plug-and-play accessories from Atlas Copco's Quality Integrated Fastening (QIF) range. These provide operator feedback or guidance, and the capability to handle product variance, or to monitor the processes.

Go into production in just 4 weeks!

Submit a detailed request to us and we are able to quote you within 24 – 48 hours. Once the order is placed we are able to build, test and deliver your multiple in 4 weeks, depending on where in the world you are located.

Multiples by Express® can be tailored to your needs

Our modular system is the backbone of our multiples concept. Whether you choose rapidly delivered Express Multiples, Extended or fully Engineered solutions, all are based on modules. Depending on the complexity of your needs we have different offers. They are all based on the modular system and cover a wide range of applications.

^a To be used as a guide only, final torque depends on type of joint, accessories used and air pressure.

^b Female hexagon drive. Quick change chuck.

^c With TRIM valve fully open.

^d In full speed mode.

For more options, see Industrial Power Tools catalogue.

Note: This is just a selection of tools from our extensive range. Please refer to the current edition of our main catalogue, "Industrial Power Tools", to see all the versions available.

^a Without reaction bar. Recommended hose size: 13 mm. Sound level: 79 dB(A)

LTP61 H/HR: Change over torque is around 4% of maximum torque on a given air pressure.

Reaction bars, see page 57

LTP61 PH/PHR: Change over torque is around 10% of maximum torque on a given air pressure.

Recommended hose size 13 mm for hose length up to 5m and 16mm hose size for lenght 5 - 10 m.

All LTP-LMP tools need lubrication.

Note: This is just a selection of tools from our extensive range. Please refer to the current edition of our main catalogue, "Industrial Power Tools", to see all the versions available.

Note: This is just a selection of tools from our extensive range. Please refer to the current edition of our main catalogue, "Industrial Power Tools," to see all the versions available.

Tensor Modularity

The Tensor family uses a modular concept based on standard hardware and software.

Accessories – Pulsor / LTP/LMP

Pulsor C

Tool accessories

Model	Ordering No.

* Required air flow 60 m³/h or 35 cfm.

^b 186 mm (7.3") suction hose connector included.

H = With handle.

S = Without handle.

All data at 6.3 bar.

-9 Velcro pad, 9 holes.

Note: This is just a selection of tools from our extensive range. Please refer to the current edition of our main catalogue, "Industrial Power Tools," to see all the versions available.

Vibration and Noise Emission Values

The values you will find in this table are the official declared values both for vibration and noise. On December 29, 2009 the new Machinery Directive, 2006/42/EC repealed the directive 98/37/EC. From that date the 3-axes vibration total values are the official values. For most of our tools the new values are measured according to the relevant part in the ISO 28927 series, while the previous values were measured to one part of the ISO 8662 series, or for electric tools one part of the EN 60745 series. For machines where no specific test code exists the ISO 20643 is used. In such cases the test procedure must be described in detail in connection to the given values.

Measuring vibrations in three directions

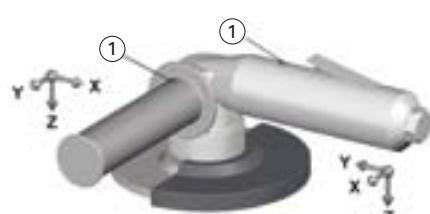

A vibration total value is based on a vibration measurement in three directions.

The value is the vector sum of the three different directions. The vector sum is always higher than one single direction. On machines intended to be used with two hands, two positions are measured and the position with the highest value is declared. There is no fixed relation between 3-axes and 1-axis values. Therefore comparisons can only be made between values referring to the same part of the same standard. Values with no reference to a standard are meaningless and can not be used for comparisons.

Suitable for comparison purposes only

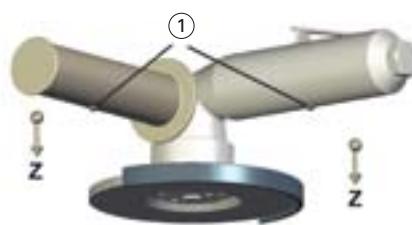

The declared values given in this table were obtained by laboratory type testing in accordance with the stated standards and are suitable for comparison with the declared values of other tools tested in accordance with the same standards. These declared values are not adequate for use in risk assessments and values measured in individual work places may be higher. The actual exposure values and risk of harm experienced by an individual user are unique and depend upon the way the user works, the work-piece and the workstation design, as well as upon the

Measurement of the **vibration total value** (3-axes value) with new transducer positions according to ISO 28927. Valid from 2010.

① Transducer position

Measurement of the **vibration value** (1-axis value) with previous transducer positions according to ISO 8662. Valid until 2009.

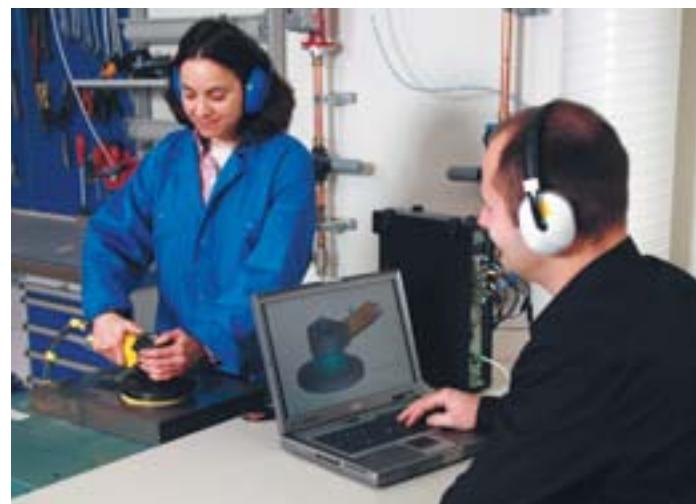

① Transducer position

According to the new standard ISO 28927 vibrations are measured in 3 directions both on the trigger and the support handle. The transducer positions are also moved. The new locations between thumb and index finger are chosen to avoid disturbance of the operators normal hand grip.

exposure time and the physical condition of the user. We, Atlas Copco Tools AB, cannot be held liable for the consequences of using the declared values, instead of values reflecting the actual exposure, in an individual risk assessment in a work place situation over which we have no control.

Managing hand-arm vibration

Power Tools may cause hand-arm vibration syndrome if the use is not adequately managed. An EU guide to managing hand-arm vibration can be found at www.humanvibration.com/EU/VIBGUIDE.htm. We recommend a programme of health surveillance to detect early symptoms which may relate to vibration exposure, so that management procedures can be modified to help prevent future impairment.

Atlas Copco has a well equipped laboratory for measuring tool noise and vibration emissions. It contains advanced vibration measurement tools, a state-of-the-art acoustics laboratory and dedicated computer software for analysing measurement and test results.

Additional information about the tests, vibration control and regarding in-use vibrations can be found at:
www.atlascopco.com/tools/ergonomics.

From this website you can download an up-to-date pdf file containing all the vibration total values for our tools
